

STRATEGIC FORENSIC AUDIT

CAMPAIGN INFRASTRUCTURE DIAGNOSTIC

A forensic evaluation of the Take Charge Roofing ad ecosystem. This report reconciles cross-export spend discrepancies to isolate high-risk delivery patterns and tracking failures.

EFFICIENCY BASELINES

WEIGHTED CTR

2.08%

RECONCILED SPEND

\$3,137.11

CONTROL CPL (ABO)

\$60.78

DATA SOURCE RECONCILIATION

REPORTING SOURCE	SPEND VERIFIED	ANALYTICAL PURPOSE
Campaign-Level Export	\$3,137.11	Primary 30-day audit performance baseline.
Placement Breakdown	~\$3,172.73	Platform delivery and placement efficiency review.
Age/Demographic Breakdown	~\$3,173.80	Targeting accuracy and budget over-allocation review.
Ad-Level Export	~\$3,195.31	Asset-level engagement (Hook/Hold) and creative heatmap.

*Discrepancies are expected due to export timing, attribution window shifts, and real-time reporting delays. Campaign-level data remains the master audit baseline.

FUNNEL LEAKAGE & TRACKING RISK

54.47%

CLICK DISCREPANCY

951 Traffic Clicks vs 433 Verified Landing Page Views. The "Traffic" objective is driving significant bounce-off. Immediate migration to Lead-Objective forms is required to prevent capital leakage.

⚠ CRITICAL TRACKING FAILURE

The active **Lead Forms** campaign spent **\$186.32** with **0 tracked leads**. This indicates a terminal misconfiguration in the Instant Form attachment or CRM API sync. Tracking repair is the #1 priority.

CONFIDENCE MATRIX & AUDIT INTEGRITY

HIGH CONFIDENCE

Traffic Campaign Inefficiency

951 Clicks vs 433 Sessions proves the current click-based objective is losing ~54% of intent.

HIGH CONFIDENCE

65+ Over-Consumption

65+ took 45% of total budget. Inside lead campaigns, CPL reached \$88.06 (Triple younger core).

HIGH CONFIDENCE

Broken Lead Forms Setup

\$186.32 spend with 0 leads confirms misconfigured Instant Form or sync failure.

MEDIUM CONFIDENCE

Reels/Stories Risk

High spend, but requires isolated Lead-objective testing before permanent blacklisting.

CREATIVE HEATMAP & HOLD RATES

ASSET GROUPING*	HOOK (3S)	HOLD (THRU)	VERDICT
Insurance / Educational	21.2%	39.8%	STABLE HOLD
Roof Shoot / Jobsite	24.5%	38.9%	HIGH INTENT
Generic Promotion Series	22.1%	30.5%	HOLD RISK

*Groupings derived from asset naming conventions (Insurance Owes You, Roof Shoot). Creative series grouping should be verified before final scaling.

THE DECISION METRIC LADDER

CTR / CPM	Vanity Metrics: Only measures attention, not revenue.
CPL	Cost of Lead: Useful for pacing, but can hide poor lead quality.
CONTACT RATE	Lead Integrity: Are we reaching real homeowners?
BOOKED INSPECTION	Primary Decision Metric: The ladder starts here.
COST PER SOLD ROOF	Ultimate ROI: The final arbiter of campaign success.

Strategic Goal: Shift optimization from "Cheapest Leads" to "Most Profitable Booked Inspections."

IMMEDIATE TRACKING REPAIR CHECKLIST

- | | |
|---|---|
| ☐ Submit test lead from mobile device & verify delivery. | ☐ Verify Instant Form attachment to active campaign. |
| ☐ Confirm CRM/Zapier/GHL API sync status. | ☐ Match Meta Lead Center count against CRM totals. |
| ☐ Rebuild deleted/missing 'LP Lead' pixel event. | ☐ Verify Conversions API status in Events Manager. |
| ☐ Audit Form fields: Name, Phone, Email, Zip, Homeowner? | ☐ Confirm automated Lead Timestamping in CRM. |

30-DAY EXECUTION ROADMAP

PHASE 1: STABILIZATION (FIRST 48 HOURS)

▼ PRIORITY

- Pause **Traffic Objective** as primary lead source.
- Execute full-form test-submission to solve zero-lead anomaly.
- Fix broken Wix/Public routing links in ad copy.

PHASE 2: RELAUNCH (DAYS 3-7)

- Relaunch **LF ABO** as the control baseline (\$60.78 CPL target).
- Implement 70/20/10 Budget Framework: Control / Placement Test / R&D.
- Create Capped 65+ test set vs 35-64 Main Core.
- Deploy "**Higher Intent**" vs "More Volume" Form split-test.

PHASE 3: SCALING (DAYS 8-30)

- Scale budget based on **Cost Per Booked Inspection**.
- Retire creative with low hold rates or poor lead-to-contact ratios.
- Activate 10% "Creative R&D" for Storm and Offer-specific hooks.
- Build Retargeting audience from page engagers & video viewers.

STRATEGIC VERDICT

The Take Charge Roofing account possesses strong creative assets but is suffering from fundamental infrastructure leakage. By stabilizing the control campaign, repairing the Lead Form sync, and pivoting from raw CPL optimization to **Cost Per Booked Inspection**, the account should restore baseline performance to the \$60 range while significantly increasing lead quality and down-funnel conversion rates.

GEOGRAPHIC & LOCAL WASTE AUDIT

DMA PERFORMANCE RECONCILIATION

TARGET MARKET (DMA)	SPEND VERIFIED	LEADS	CPL	STATUS
Atlanta, GA	\$3,103.47	30	\$103.45	CORE MARKET
Greenville-Spart-Ashevil-And (NC/SC)	\$21.22	0	\$0.00	LEAKAGE

INSIGHT

The "Atlanta DMA" Trap

99.3% of spend is correctly centered on Atlanta. However, the Atlanta DMA covers 50+ counties. **Local waste** is likely hidden here—drivers shouldn't be traveling 60+ miles for inspections.

DMA LEAKAGE

Out-of-State Reach

The \$21.22 spent in the NC/SC border region confirms that "Advantage+ Expansion" is reaching beyond the primary service territory, albeit at a low volume.

GEO-REMEDATION STRATEGY

1. MOVE TO RADIUS-HARD-STOP

Ditch "State" or "DMA" targeting. Use a **30-mile fixed radius** around the office to ensure every lead is within a profitable drive-time window.

2. ZIP CODE EXCLUSION LOGIC

Manually blacklist zip codes with high rental density or low-income mobile home parks where roof replacements are statistically improbable.

3. INSTANT FORM "CITY" VERIFICATION

Add a mandatory City/Zip question to the Lead Form. If the city is out of bounds, the lead is disqualified before hitting the CRM.

GEOGRAPHIC CONCENTRATION VERIFIED

Audit confirms 99%+ market adherence with minor (<\$25) out-of-state leakage.
